limestone is thinly bedded up to 10cm, with much ~~more~~ persistent chert bands. Chert has accentuated folding and highlighted faulting. Also good differential solution/erosion is shown throughout the cave, chert stands proud.

### Tham Than Lod Noi

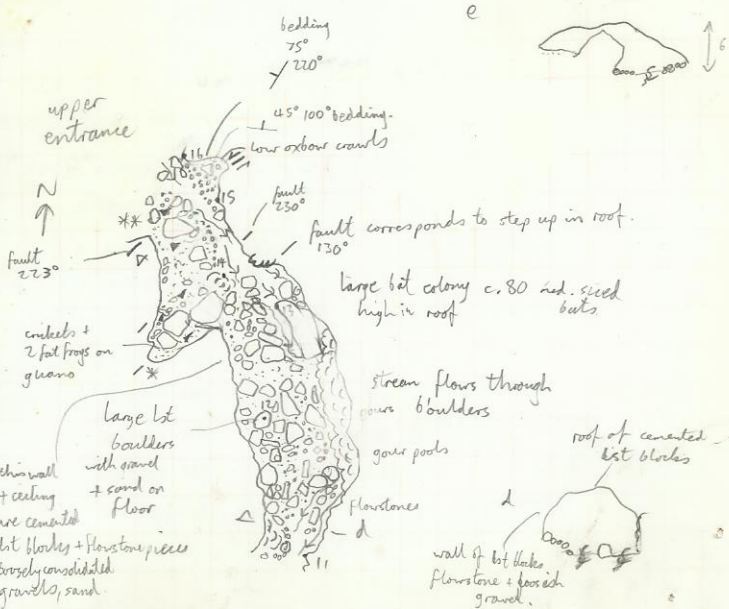

floor seds - exotic mix.  
 larger boulders tend to be lat + cemented lat blocks  
 from roof or walls.

sub rounded → subangular blocks of sandstone/quartzite up to ~~10cm~~ 1m  
 across quite common.

smaller granite pebbles ← very rounded granite blocks up to 30cm rare. (except 1 boulder)  
 Common  
 v. rounded  
 vein quartz/calcite in gravel sized up to 10cm  
 common  
 (pos. floorstone as larger  
 pieces c. 50cm φ seen).

\* this is pos upper level  
 choked with seds, boulders  
 + floorstones.

\*\* righthand side of entrance  
 has roof of cemented seds.  
 LHS doesn't

### Tourists general

Present - generator run electric lights, switched on/off to set times.  
 free hanging bulbs, wiring generally OK but still visible, at least  
 3 runs of wire, trail - none although concrete rings have been  
 used in the past + washed out by floods (up to 2m above  
 normal), no interpretation, visitors are self guided

future - better lighting (barrow hoods), trail, interpretation  
 signs.
