

Tham Men

NP041407

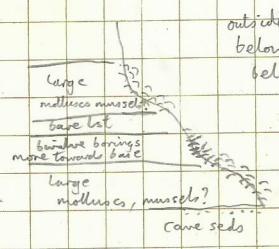

50m off road at HA, on opposite side to mountain = Khao Daeng.

start D B A L R C F

1 → 2	10:20	310	-3
3 → 2	2:20	212	00
4 → 2	15:20	020	+4
5 → 2	5:80	045	00
6 → 2	9:20	100	00
6 → 7	10:60	307	00
6 → 8	13:00	270	-09
4 → 8	13:80	290	-04
9 → 8	11:50	155	-06
10 → 8	13:50	040	00
11 → 8	20:60	090	-18

section through notch.

outside cavern = 8m below entrance, c. 6m below start 11.

← 1.8m → range 0.4 → 2.8m

broken speleothem earthquake gap = 5-6cm in diameter 5.4m across.

short but largish, roof c. 15m-20m.  
 2 chambers of ancient phreatic origin, domed roofs and flat sed. floors. small oryx tubes connect round; no sign of porcupine, but a few bats, crickets on guano, spiders, little else. daylight penetrates most of cave.  
 near entrance boulder slope is a main notch along wall. large bivalve shells encrust rooves + overhangs + another bed with borings. see sketch. obviously much later modification, also loose mollusc shells + 1 corals  
 found on floor of entrance chamber  
 molluscs are concretions, building up, borings obviously destructive  
 molluscs seem to prefer under side of overhangs but not exclusively  
 altitude seems poor important  
 all shells are dead, sea appears to be lower ~~water~~ cave.
