WALLS
TA 0134

cave in ancient phreatic
formed along faults as
high rifts
pos. old route for water
in lower cave.

a few bats, not many, floor = silt + guano on
floorstone layers. one snake skin, porcupine quills
common, a couple of large crickets

These 2 caves in an area of low karst hills, rounded
with little rock outcrop. limestone in stream silt is
reddish breccia = Triassic/Jurassic limestone?
bedding in upper cave dips to WNW at about
60° although bedding is highly variable.
